1001 Harry Tython Man 1 Harry MARINE MAXIMUM MARINE

[繳交期限]: 2020/07/03 (Fri) 23:00 (注意: 遲交如同未繳交,都以零分計算)

([建議]: 無論是否能完成所有問題需求,請務必於期限內,上傳期末報告電子檔!)

[繳交方式]:請將期末報告電子檔(ipynb)上傳至 LMS 教學網,檔案名稱如下:

"ML final 第00組.ipynb" (例如: ML final 第1組.ipynb)

[報告格式]:

- 1. 報告內容一開始,請註明組別和所有組員們的"系所/年班/學號/姓名"。
- 2. 其餘內容及格式,請參考下列文件:

[Reference]

- 1. "Scikit-Learn_Workshop_2-SL-Classification_Models.ipynb" (課程教材)
- 2. Jake VanderPlas, Sec. 5-2 "Application: Exploring Hand-written Digits," OReilly, 2017. https://jakevdp.github.io/PythonDataScienceHandbook/05.02-introducing-scikit-learn.html

[期末報告問題]:

A. 多元分類問題 — Hand-written Digit Recognition (60%)

請將上列 [Ref. 2] 中,sklearn.datasets 的 Hand-written Digits 影像資料透過下列 分類演算法,建立預測模型:

- (1) Nearest Neighbors [KNeighborsClassifier]
- (2) Naive Bayes [GaussianNB]
- (3) Neural Networks [MLPClassifier]
- B. 二元分類問題 Breast Cancer Diagnosis (40%)

請將 Breast Cancer Wisconsin (Original) Dataset - UCI: wisc_bc_data.csv 特徵資料 先進行 z-score 標準化 (standardization);之後,再利用下列演算法建立預測模型:

- (1) Nearest Neighbors [KNeighborsClassifier]
- (2) Naive Bayes [GaussianNB]
- (3) Decision Trees
- (4) Logistic Regression

其中,上述[問題 A]和[問題 B]中的各演算法結果,必須包括下列輸出:

- (a) Accuracy score for [85% training data & 15% testing data]
- (b) Confusion Matrix for [85% training data & 15% testing data]
- (c) Cross-Validation Results for [cv = 5]
